

A black and white photograph of chess pieces, specifically kings and queens, arranged in a row. The pieces are made of a light-colored material, possibly wood or stone, and are set against a dark, blurred background. The lighting creates soft highlights on the pieces, emphasizing their texture and form.

INDEPENDENT PHYSICAL  
SECURITY CONSULTING

## ORIGINAL THINKING MATTERS

*"Businesses, organisations and residential communities in Southern Africa remain under pressure to respond with insight and agility to the efforts of intelligent criminals, internal and external, who are intent on uncovering and exploiting any vulnerabilities within their environments and operations."*

*The number of organised syndicates operating in the region, and their brazen behaviour highlight the need for original thinking. As Albert Einstein said: "You cannot solve problems with the same level of thinking that created the problems".*

*At Liebenberg & Associates we strive to outthink and outsmart criminals. We push ourselves to think outside the box and act with deeper understanding and know-how. This enables us to develop forward-thinking security master plans to ensure that our clients will be resilient against the full spectrum of risks that threaten their wellbeing.*

*Our clients deserve to work and live in a world where they can prosper unfettered by criminals and we are committed to help bring that about."*

*- Danie Liebenberg*

**Liebenberg & Associates, founded in 2009, is an independent security consultancy operating across Southern Africa. We specialise in developing innovative security master plans tailored to the region's complex threat landscape. Our expertise lies in anticipating how criminals adapt, how security measures may be bypassed, and how risk patterns evolve, ensuring our clients stay ahead of emerging threats.**

Our clients range from mines, farms, and factories to logistics companies, wholesalers, retailers, healthcare facilities, educational institutions, residential estates and many more. We design security master plans, manage their implementation, and continuously monitor their effectiveness to ensure enduring resilience. In addition to proactive risk mitigation, we analyse security related incidents, providing clarity and ensuring that the insights gained result in a more robust security posture.

Shaped by South Africa's high-risk security environment, our expertise has been honed in one of the world's most challenging settings. This experience equips us to help create secure operations and communities that can withstand crime-related risks across the subcontinent. We employ proprietary methodologies refined in-house, continuously updating our approach to incorporate advancements in technology, business processes, geopolitics, security standards, and industry regulations.

Led by our founder and managing consultant Danie Liebenberg, our team includes a risk analyst, system designer, technical project manager, auditor, training officer and incident analysts, all committed to delivering bespoke solutions. By implementing forward-thinking security strategies, we help our clients establish safe environments where they can live and work without the disruption of criminal threats.

## CONSULTING:

The resilience of any business, organisation or residential community against physical risks and threats depends on the strength of its risk mitigation plan and the effectiveness of its implementation and management.

For those responsible for the well-being of people, assets or properties, a clear understanding of all potential threats, the value of existing security measures, and the extent of their vulnerabilities is essential.

We provide this understanding. Through comprehensive risk, threat, and vulnerability assessments, we evaluate our clients' security operations and systems, enabling us to develop robust mitigation plans, policies, and procedures. We further design security systems that ensure our clients remain protected in an ever-evolving risk landscape.

Our technical project manager oversees the implementation of these plans and systems, ensuring that our clients receive exactly what we have recommended - rather than what suppliers, installers, or service providers prefer to sell.

Once implementation is complete, our training officer ensures that all stakeholders contribute effectively to the success of the mitigation plan before passing oversight to our risk auditor.

Our auditor continuously monitors the plan's effectiveness, with each audit leading to adjustments that drive continuous improvement in pursuit of optimal security.

## ANALYSING INCIDENTS:

When a security-related incident occurs, our first priority is to establish the facts and understand what really happened. By doing this we seek to uncover the underlying causes, contributing factors, and weaknesses that allowed the incident to take place.

By gathering and analysing information in a structured way, we provide clarity that clients can rely on. Our findings explain not only what happened, but why it happened, giving decision-makers the insight they need to take corrective action and prevent a recurrence.

Every analysis is thus an opportunity for improvement. By identifying the gaps in systems, processes, or defenses, a professional incident analysis highlights the areas where a security master plan can be strengthened. This makes it a powerful tool for building resilience, not just resolving an incident.

Our analysts are recognised for their thoroughness and discretion. We approach each case with the same commitment: to understand an incident, provide clarity, and deliver practical lessons that help our clients safeguard continuity, stability, and reputation.

Important note - An incident analysis undertaken for the purpose of understanding how security can be improved should not be confused with an investigation, which has as its main purpose the identification and prosecution of perpetrators. We do not conduct investigations.

# FREE-STANDING SERVICES

Whilst we are well known for developing, implementing and monitoring the effectiveness of comprehensive security master plans, we also offer the following "free-standing" services to clients who only need assistance in a specific area:

- Assessments to identify risks and threats.
- Evaluation of existing risk mitigation measures.
- Identification of vulnerabilities.
- Technical design of security systems and professional oversight of installations.
- Facilitation of security tenders.
- Writing of security policies and procedures.
- Analysis of security-related incidents.
- Security awareness training.

# VALUES, VISION & MISSION

## Our values:

We are committed to integrity, innovation and performance in everything we do. Our approach is built on extensive expertise, strategic foresight, and a pursuit of excellence.

## Our vision:

To be widely known for our ability to anticipate threats, develop resilient security plans, and help create environments where businesses can operate with confidence and people can live in peace.

## Our mission:

We help to create secure environments by developing, implementing and monitoring bespoke security plans, and by providing deep insights into security-related incidents.
